

Magnesium Fluoride(MgF₂)

SPECIFICATIONS

Magnesium fluoride (MgF₂) is a birefringent crystal with good optical properties in the UV band and it is the known optical crystal in the UV cut-off band. Magnesium fluoride has good transmittance in UV, visible and IR fields, and is widely used in scientific and technological fields such as laser, IR optics, UV optics and high energy detectors. With high transmittance and low fluorescence radiation, magnesium fluoride is an ideal material for UV photodetectors, UV lasers and UV optical systems.

OPTICAL

| | |
|--------------------------------------|--------------------------|
| Transmission Range, microns | 0.12-7.5 |
| Transmittance, at 0.193-6 μm | >90% |
| Reflection Loss at 1μm(double-sided) | 5.1% |
| Absorption Coefficient at 2.7μm | 40×10 ⁻³ |
| Structure | Quadratic Crystal System |
| Cleavage Planes, direction | <100> |

THERMAL
