## Professional Shadow-Free Forensic Photography Work Station OR-GTY100

### Product details

The Forensic Photography Work Station transmitted photography, with multi-color uniform light transmission light source at the bottom and flood light source and multi-color uniform light source at the top. The hovering bracket is adopted, which is easy to take pictures stably.

### FEATURES

- The system for photographing can better reduce the interference of the light shadow of material evidence on photographing. More complete details of reaction physical evidence.
- It is easier to take photos by using air hovering support and universal pan tilt. You can take big physical evidence.
- Using multi band light source, color separation photography can be carried out to better reflect the details of physical evidence.

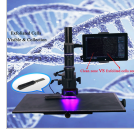

- Multi-band light source can also be used as excitation light source to stimulate the fluorescence reaction of material evidence.
